

FLYING SAUCER REPORTS BEING PROBED

LONDON (A.A.P.).—
Royal Air Force experts are studying reports from 10 experienced officers and men who have described with almost identical details the appearance and behaviour of a "flying saucer."

The "saucer"—the second seen within a week by European observers familiar with aerial objects—was reported to be following a Meteor jet fighter over Yorkshire during "Exercise Mainbrace" on Saturday.

In Central Sweden on Saturday, a former air force flyer, Ture Innala, watched a "snowplough shaped cloud with bub-

bling smoke from its tail" appear very high and streak across the sky at colossal speed.

It dropped a "blue-green shimmering plate which changed course and disappeared just as fast in the opposite direction.

His wife supported his testimony.

On Sunday two men in the West Swedish port of Gothenburg reported seeing a noiseless, brightly shining object moving at great speed across the sky at about 6500ft.

They believed the object, which had a phosphorescent tail, must have been a "flying saucer."
