

## **Israel's First Flying Saucer**

Haifa, (J.C.S.).—Israel's first flying saucer was reported to have been seen by several persons who said they observed an elliptical green light with a revolving belt round its centre flying over Mount Carmel.

The light, which was shaped like a saucer, they said, appeared about 7.30 p.m. and was visible for several seconds. Flying objects were reported to have been seen over Acre early in 1948, before the establishment of the State, but this apparently is Israel's first flying saucer.

By next summer Israel is expected to grow enough vegetables to meet all local demands, it was announced here by the Deputy Minister of Agriculture, Mr. J. Efrati. This, he said, would mark an important stage in Israel's struggle for self-sufficiency in food.
