

Flying Saucer Seen By Two Local Residents

What is reported to have been a "Flying Saucer" was seen on Saturday night at about 8.50 o'clock by Messrs P. J. Byrne and R. A. Bevan.

These two Burra residents were standing outside Mr Bevan's shop, when Mr Bevan drew Mr Byrne's young son's attention to an object which came in view from a North Easterly direction over the roof of the Fire Station. Mr Bevan stated he thought at first that the object was an aeroplane.

Mr Byrne stated that the object was moving much too fast for an aeroplane, although it appeared to have a white light at each end and was leaving a trail of vapor or smoke behind it. It travelled in a straight line at a tremendous speed, and eventually disappeared from view over Brewery Hill.

The assumption that it might have been a meteor is out, because a meteor would have fallen towards the earth whereas the object seen by Messrs Bevan and Byrne kept at the one level.

Many people throughout the State report having seen a similar object in the sky at about the same time.

**a similar object in the sky
at about the same time.**
