

"Saucer" claim

AUCKLAND, Sept. 30.—A claim they saw a "flying saucer" was made today by a reputable Auckland and his wife.

Like a large aeroplane, 10,000 feet high, it flew southward from horizon to horizon, disappearing in about six seconds.

"It was an elongated form, of cigar or tubular shape, showing on the visible side six or eight lights," he said. The man added, "There was no sound other than a barely audible 'whoosh.'"

The saucer was seen at 11 p.m., last Saturday.
