

Flying Object Puzzles Many People

SINGAPORE, Wed.—Hundreds of people in the oilfield town of Seria, in Brunei, are puzzled for an explanation of a flying-saucer phenomenon seen there yesterday afternoon.

In a clear blue sky they saw a trail of white cloud pointing, like a finger, to a tiny but exceedingly bright star-like object which hovered at an estimated 30,000ft. for 40 minutes.

The object appeared to be rotating slowly with two jets of vapour or cloud formation appearing and disappearing at its edges.

On several occasions recently flying saucers have been reported in the skies over Borneo.—A.A.P.-Reuters.
