

## THEY SAW IT TOO

Following a report on Wednesday that a "flying saucer" was sighted over Warwick, a number of people in the Kalbar area today claimed to have seen a "round silvery object" in the sky about 3.15 p.m.—shortly before the Warwick appearance.

The object was said to have come from the north-east and, after a steep dive, flattened out, and disappeared in the western sky.

Besides a number of residents, school children returning home, said they observed the object's manoeuvring.
