

"Flying saucer" at Bendigo

BENDIGO. Wednesday: Further reports of a strange, bluish-green object, described as a "flying saucer", which was seen last night, have been received today.

It appeared in the sky over White Hills, and seconds later disappeared over Golden Square, eight miles away.

Three people reported seeing the object last night, one getting such a shock that he ran his car from the road.

Today two confirmations were reported, and each description tallied with the earlier ones.

A man said he had been driving a car at Kangaroo Flat when he saw the thing "whizzing" through the air. He jumped out of his car to get a better look, but it quickly vanished.

He saw it for about 15 or 20 seconds, and said it was blue-green in color.

The fifth to report the phenomenon, a woman, also said she had seen the object.

Descriptions included the size, about two feet in diameter, and the speed, reputed to be faster than a jet plane.
