

# HE SEES SAUCER

NEW YORK, Sat (Special) — A retired United States Marine Corps major insisted to-day that "saucers," presumably from another planet, were unquestionably making sorties over the earth.

And one of Britain's leading aircraft experts immediately shot them down with one broadside—"Poppycock."

Major Donald E. Keyhoe says in a new book, *Flying Saucers from Outer Space*—"Air Force investigators have had to write 'unsolved' on 14.3 per cent of the 2000 saucer reports they have investigated since January 1, 1952."

Major Keyhoe says in the past nine months he has seen most of the evidence Air Force intelligence has disclosed to a selected group of high Government officials in secret briefings on the saucer mystery.

He accused Air Force chiefs of trying to conceal facts from the public.
