

# Real Flying Saucer

**Eyes turned to the sky at Moorabbin, Victoria, when a circular object flew across the sky. Crowds ducked and turned as they watched a flying saucer in action. They had no need to worry, as it was only a model saucer made by 14-year-old Adrian Chipper, of Frankston, Victoria. He designed and made the model himself. It is powered with a small diesel engine. Adrian built the machine in three weeks. Here is Adrian with his model.**
