

## FLYING SAUCER CAMERAS SET UP IN AMERICA

WASHINGTON, Dec. 1 (A.A.P.).—The United States Air Force announced to-day it had installed "flying saucer" cameras to help find an explanation of the mysterious radar-confirmed objects reported streaking through the skies. About 75 cameras, set up at air force bases in 33 States, are designed to analyse moving lights to determine whether they are merely insubstantial glows or from identifiable material objects.
