

If you see a saucer—

The Civil Aviation Department and the Australian Flying Saucer Investigation Committee would like to hear from anyone seeing "unidentified objects" in the sky.

The department is interested in case the "objects" are aeroplanes; the committee is interested in case they aren't.

Mr. D. K. Thomson, a member of the Australian Flying Saucer Investigation Committee, said yesterday: "If we can get enough first-hand reports we may discover some trends in the appearance of the objects — there may be something in common, for instance, in the times they appear."

Mr. Thomson can be contacted at 23 Alexandra ave., South Yarra (BM1838).
