

# Was It Flying Saucer ?

---

At least two reports have been received of a brilliant blue ball of light crossing the midnight sky on Wednesday.

A motorist returning from Arrilalah says that at about fifteen minutes to twelve he noticed a blue light reflected on fence posts and trees. At first it appeared to be lightning, but on stopping the car he could see the ground was brilliantly illuminated for miles around.

He says it looked like a very vivid flash of lightning, and he saw a huge ball of blue light disappear on the southern horizon.

The second report has been received from a mailman who was in the vicinity of Mt. Victoria at the time. He reports much the same phenomena as the other motorist . . . but as to what it was is a matter for conjecture.
