

Two Saucers In One Night

MMELBOURNE, Sat: Two strange objects were seen in Victorian skies during last night.

Mr. W. Allen saw a flying saucer 20 to 30ft. in diameter at 1 p.m.

Said he: "It was a shining object moving much faster than any aircraft and gave out a red vapour as it moved towards the bay about 2000ft. up."

Mr. Mark Wallace and his two teenage children saw a vivid orange light, the size and shape of a new moon, in the southern sky at 10.50 p.m.

The light became a circle before it disappeared in the west. It was low in the sky and visible for four minutes.
