

Flying saucer investigations

MELBOURNE — The question whether there is any connection between reports of flying saucers and streams of meteor remnants which have broken up in outer space, and through which the world passes from time to time, will be investigated by the Australian Flying Saucer Investigation Committee

The Minister for External Affairs (Mr. Casey) on Saturday drew attention to the fact that observation had led him to believe that there was some such connection.

The chairman of the investigation committee (Mr. D. Thomson) said his committee would investigate the theory, but it would have to be supported from other countries as well as Australia because conditions applying here might not apply in other countries.
