

'SAUCER' ENQUIRIES FROM ENGLAND

— o:—
SOME ARE HOSTILE
—

The fame of the Alice Springs "flying saucer," picture in last week's and the "Advocate" of February 5, has spread to England. This week we received word that a similar "type" to our saucer was seen and photographed by two young boys in the Westmorland Lake district of England.

A letter arrived this week from an English writer, Mr. Harold T. Wilkins, who is now finishing off a book entitled "Flying Saucers on the Moon." He is interested in the Alice saucer and wishes to publish the picture and other details in his book.

We again appeal to "Unknown", the person who took this picture

to either contact our office personally or by letter. Enquiries

sonally or by letter. Enquiries are flowing into the office and we would like to give positive answers on the question of authenticity.

Saucers B.C.

The English writer claims that he has traced records of sightings of weird "aeroforms" as far back as 90 B.C. in Latium Rome, and 1290 A.D. in mediaeval England.

He says this does not alter the fact that serious conclusions must be drawn from the reports. He further states that the British, French, American and possibly the Australian War Departments know certain facts about these aeroforms, some of which are definitely hostile.

Referring to the Alice saucer, Mr. Wilkins states that he believes it was an interplanetary visitant of the type seen in parts of the U.S.A. since 1949, and just recently, photographed by two boys in a lonely region of Westmorland.

Other Reports

While still retaining an open mind on the subject, the "Advocate" would appreciate any reports from people who claim to have heard or seen anything in

have heard or seen anything in this area. Names will be kept secret if desired. Since our last report, a well known Alice woman has reported that she heard a strange craft hovering over the town. She says that it sounded as though it was rotating, then made off at lightning like speed. This is the seventh report of this nature. Explanations may be simple in every case, but the sighting by Mr. K. Heaslip on the morning of January 15, of a strange "aeroform" is harder to laugh off.
