

Trainmen Turn In Report On "Saucer"

MARYBOROUGH, March 16.—An unidentified flying object this afternoon appeared to "accompany" a cane train part of the way from Baddow to Maryborough before abruptly changing direction and disappearing at a fantastic speed.

The incident was related afterwards by the driver of the train, Mr. A. Jesse, of 122 Woodstock Street, who said that his fireman, Mr. G. Jensen noticed the object first as the train was leaving Baddow station at 4.24 p.m.

Mr. Jesse said that the object appeared to be a square cut shape and was devoid of wings, tail, propellers and other conventional aviation aids.

It was so brilliantly lit—apparently by the late afternoon sun—that it was difficult to look straight at it for long. No engine noise was heard.

Although he could not estimate the height or the speed of the "thing" Mr. Jesse felt that it was traveling high and faster than the average plane. He said that the object appeared to glide along more or less parallel to the railway line until it was roughly over Pallas Street.

Then it veered away to the north and disappeared in a matter of seconds.
