

## NOT A "FLYING SAUCER"

WHAT LOOKS LIKE a real "flying saucer" is, in fact, an important piece of equipment built at Stockton-on-Tees by the Power Gas Corporation for the Imperial Chemical Industries. Technically referred to as a "dished end," this 11-foot diameter stainless steel shape is part of a pressure filter for the new I.C.I. works at Wilton, where British wonder fibre "Terylene" will be manufactured on a large scale. "Terylene" looms large in the latest developments of synthetic fibres and fabrics.
