

Flying saucer

SIR,—I shall be most grateful for your assistance in combating a current rumor to the effect that the Australian Flying Saucer Bureau has in its possession a piece of a Flying Saucer.

The story is denied by myself on behalf of the Bureau, and probably arose from the admitted fact that the Bureau has received from Shepparton, Victoria, a portion of one of several mysterious 30ft. long, unidentified objects observed passing over the town at 4 p.m. and again at 4.30 p.m., on May 12.

It is proposed to submit the portion of strange material in our possession to chemical and/or whatever other analysis may be necessary in order to determine its exact composition and origin.

Until the result of expert analysis is received, no further comment can be made.
