

**FLYING
SAUCER
OR ---- ?**

This photograph was taken by an amateur photographer in Melbourne who sent it and the negative to a newspaper there.

He did not claim that the object in the top corner was a "flying saucer" but something that might be an answer to the riddle.

He said that he had his camera cocked waiting for another photograph of the bride who was just entering the church on April 4 last year, when he saw something out of the corner of his eye.

He turned and automatically tripped the shutter while the camera pointed at the sky.

The perfect geometrical figure with a dark circle under it, he says, cannot be a reflection of the sun which is seen in the opposite corner at the bottom of the photograph.
