

FLYING SACER — WITH A DIFFERENCE

Three Glen Innes buussmen—all using binoculars—last night watd a "flying saucer" with a difference.

It didn't fly.

It hovered in the south-eastern sky from about 8.30 p.m. until at least 10 p.m., constantly changing its colour.

The men who saw the "saucer" were Messrs. A. C. Alcock, J. A. Tratt and N. Schmidt.

Mr. Alcock said this afternoon that the "saucer," seen through the naked eye, looked at first to be cone-shaped.

"But when I took a look through the binoculars it seemed to be more round than cone-shaped," he said.

POWERFUL GLASSES

"Mr. Tratt inspected the phenomenon through his binoculars, and Mr. Schmidt brought a powerful pair of racing glasses from his shop.

None of us could work out what the "saucer" was.

What the "saucer" was.
I was still there when I
went to bed about 10 o'clock."
Mr. Alcock said the "sauc-
er" kept changing colour, and
was green, blue, red and yel-
low at various stages.
"It seemed to sparkle," he
added.
