

Mystery In Perth Sky Startles A Sceptic

A Perth business man is convinced that he saw a flying saucer from his home in Alderbury-street, Floreat Park, just before 8 p.m. on Sunday.

This follows a report by three motorists that they saw a mysterious light which "manoeuvred around the sky" soon after 8 p.m. on Sunday, north-east of Eucla.

"If it was not a flying saucer," this Perth resident said yesterday, "it was a sky-light phenomenon that I have never seen before.

"I was sceptical about all the flying-saucer reports I had read until I had this experience.

"I went out to empty some rubbish before settling down to a radio play, when I saw a particularly bright object in the sky."

"Pulsating"

"It was bigger than a planet," this business man continued, "and it was clear white, with

and it was clear white, with pulsating beams of light radiating from its circumference.

"Suddenly it appeared to move away.

"It grew smaller and disappeared from my view in about ten seconds."

This informant added that the strange object had no lateral or horizontal movement from his position.

It was about 30deg. above the horizon when he saw it first.

He preferred not to give his name for publication, he said, because, most people seemed to laugh at those who reported unusual objects in the sky.
