

## FLYING SAUCERS COMING CLOSER ?

Several people in Guyra claim to have seen what they claim was a flying saucer.

On Sunday night Mrs. S. Seward, of Neilson Street, Guyra was outside her home when she noticed a brilliant light in the sky "something like a street lamp". She was so surprised that she called out the rest of the family who watched the spectacle for about 10 minutes. One of the family obtained a pair of binoculars and said that there were strange spurts of fire on the edges of the object.

Before disappearing the lights changed from red to a brilliant green. One observer said it was not quite round, but egg shaped.

Inquiries reveal that others in the district noticed the phenomenon. One of these was a Shire employee, Mr. E. Chapman, whose description tallied with that given

tallied with that given by those previously interviewed.

There is a possibility, according to one of the teachers at the Central School, that what was seen was the planet Mars which is at present close to the earth. This theory is discounted by observers on the grounds of the object's size. Of course atmospheric conditions may have tended to magnify whatever was seen.

We are assured that cameras will be out for the next display.
