

“Saucers” May Come From Woomera

A Sydney business man who saw a mysterious object in the night sky near Eucla, in south-west Australia, early this week believes that “flying saucers” may be guided missiles from the Woomera rocket range.

This business man, Mr. P. J. Mulhearn, now visiting Perth, stressed this opinion yesterday.

Speaking of his own experience, Mr. Mulhearn said that he and his family spent a “hair-raising” 15 minutes watching a “flying saucer,” which appeared to be under complete control.

“It came very close,” he added, “and we thought it was going to land.”

Mr. Mulhearn said that in a life-time of driving he had never before encountered a “saucer,” and had hitherto ridiculed people who claimed to have seen such things.
