

Saucer or balloon?

Eight Camberwell residents said last night they had watched a stationary "flying saucer" for some minutes soon after 5 p.m.

Brian Jones, 19, of Glyndon rd., Camberwell, told The Argus at 5.25 p.m. he had seen a round silver object near the moon and had called neighbors to watch it.

"It was so small that when he looked away we found it hard to see again," he said.

But—a Laverton meteorological official said radio-sonde apparatus had been sent up on two balloons in the afternoon.
