

# Perhaps it was a flying saucer

**DEAR Aunt Mary.**—Today I saw a very rare and wonderful sight I would like to describe to you. I doubt if any other Junior has seen the equivalent of this strange phenomenon.

As I was giving the fowls some water I chanced to glance skywards. A flimsy looking cloud shaped like an almost perfect circle arrested my attention. It took up about half the sky above our house and then trailed off as far as we could see in a tail.

The whole thing closely re-  
sembled some writing done

sembled figure writing done by an aircraft in the sky. The sky was rather windswept and it all swept towards a point in the north-west while the ring and tail were in the south.

As you can imagine it was a very picturesque and wonderful sight. The white half-transparent cloud ring; the tail, thin and flimsy trailing off through several large, brownish clouds with the bright blue sky as a perfect background and the green and brown fields below made me wonder whether there is really something in all the adult talk of flying saucers.
