

FLYING SAUCER JOKE

PARIS, Tues.: A retired miner built many of the hundreds of "flying saucers" reported in the sky over northern France recently, police said today.

The miner, whose name was withheld, did it "just for a joke."

He made the saucers, some 10 ft. in diameter, out of strong grey paper on the fire balloon principle.

After paraffin-soaked rags had been lit the warm air lifted the saucers, and off they went into the wind, displaying orange and yellow lights—
