

## "SAUCER" A METEORITE?

MELBOURNE, Monday: A "flying saucer" seen over Melbourne early yesterday was dismissed as a meteor today by Mr. Arthur Clarke, visiting former chairman of the British Inter-planetary Society.

Mr. Clarke said there was nothing mysterious about the object.

Any bright moving object seen in the sky at night was almost certainly a meteor.

Mr. Clarke said meteors flashed from space into the earth's atmosphere at speeds of up to 100,000 miles an hour.

The friction caused a brilliant burst of light.
