

## **R.A.A.F. "Flying Saucer" Probe**

**MELBOURNE, Dec. 20.**

**—R.A.A.F. intelligence is investigating the reported sighting of a weird object which "whooshed" low over Melbourne early on Sunday morning.**

A spokesman said that a report and eye witness accounts will be sent to Air Force Intelligence section for investigation.

Experts are still unable to say accurately what the object was, although most think that it was a meteor.

Today another five people reported that they had seen the object race across the sky with "a noise similar to a jet engine."

Mr. E. H. Charles, a member of the Victorian Amateur Astronomical Society Council, said. "The sighting is very interesting following the radar pick up of two unidentified objects near Nowra (N.S.W.).

"If it was a meteor it was a most remarkable and unusual one. I have never known a meteor to flood the region with a brilliant light as claimed by eye witnesses."
