FLIGHT OF "SAUCERS"

Study By S.A. Association

To The Editor

Sir—In reply to Mr. P. D. Thomas and Mr. R. G. Smith the Australian Flying Saucer Bureau which has been in operation for a considerable time in Australia, and affiliated with kindred associations all over the world, will be very glad to supply much information regarding the so-called "flying saucers."

While many of the sightings of objects can be attributed to natural phenomena, or scientific experiments, there have been an increasing number of such which are frankly admitted by those in authoritative aeronautical circles and other branches, which remain unexplained and dubbed by them as "unidentified flying objects."

It is in these which the bureau has particularly interested itself in endeavoring to tabulate and classify information

This has resulted in many indisputable cases of objects which defy all ordinary description or explanation, and for which all governments have set themselves to find an explanation.

Why the release of such information is not made generally public is that the research on these objects has been so completely astounding and revolutionary in our "own" present scientific knowledge that an admittance of such by those in authority would call forth such a flood of concern and enquiry that with the meagre knowledge available as yet, ridicule could easily be poured forth upon men who are genuinely anxious to tell us the truth about these strange and intriguing visitors.

One thing, however, has made itself completely clear.

This is that the minds behind these saucers are much more highly intelligent than ours and their source of knowledge and the power to use it has proved their possession of more highly developed scientific knowledge than our own.

But the main object of concern to us on earth, is not so much where they

not so much where they come from but what type of being they are, and their purpose.

The whole of the bureau's library of classified data, books and overseas publications is available to its members.

All these topics are fully dealt with and the reader is able to form his own intelligent opinion.

The answer to these very vital questions, must have an extremely important bearing on the future of not merely our nation but the whole world.

I shall be glad to assist anyone interested in this intriguing subject.

FRED STONE,

SA President, Australian Flying Saucer Bureau, 22 Northcote street, Kilburn.
