

Was it a "Flying Saucer" ?

Strange "Object" in the North-western Horizon

A lady resident of Alfred Street, St. George, is inclined to think she saw a "flying saucer" in the sky on Sunday night, March 13.

It was a clear night, and about 12 o'clock, in a north-western direction, she saw just above the horizon, an object about three times the size of a large star.

It was pear - shaped, and was of an orange colour with a blue - grey haze surrounding it.

The lady said the "haze" appeared to be quite close, much closer than the main portion.

The object kept spinning, at the same time a small tail appeared to shoot out from the small end of the object. When it kept spinning a bright glow came from it.

With the lady at the time was her niece who also saw the strange object.

The lady would like to know if any other residents saw it.
