

A space-woman speaks

MY attention was drawn to a letter by "Spaceman" (Opinion, November 17). I was not aware that a bureau had been started, but it is a long-felt need. I think Perth must be the last city in the world to come into line. The Duke of Edinburgh, a great Air Marshal, Lord Hugh Dowding, and quite a few scientists believe in the so-called flying saucers, and why not? They have been coming to this little planet since the beginning of time. The people who man them are millions of years ahead of us.—Oh, To Be A Space-Woman, Manning Park.

• "Spaceman" said: "As a member of the WA group of Flying Saucer Research I would like to quote from the New Zealand club journal: "Membership is steadily growing and despite the lack of New Zealand Press interest, serious interest in flying saucers and unidentified flying objects is being shown by the public and increasing daily. In the same issue we read that the Duke of Edinburgh has asked the Air Ministry for all details."
