“SAUCER” WATCH

3138
MELBOURNE, Thurs-
day.—The Australian Flying
Saucer Research Society has
bought radar and other
equipment to keep a 24-hour
watch for “unidentified fly-
ing objects.”

Equipment, including a
“Ufo-scope” and synchronised
movie camera, will be set up.

A Ufo-scope is a mech-
anism which is triggered when
something with a high electro-
magnetic field passes.

The president of the society,
Mr. Peter Norris, said to-night
the society bought the equip-
ment partly because of what
seemed to be a “conspiracy of
silence” on the part of the
Civil Aviation Department.
