

# FLYING SAUCER MYSTERY

“But I’m telling you  
there is a flying saucer

The RAAF Athlete  
(above) throwing the dis-  
cus at an athletic competi-  
tion seems to be very  
emphatic about the exist-  
ence of flying saucers.

And Dr Bart J. Bok, the  
Director of Mt Stromlo Obser-  
vatory, Canberra, issued a  
warning last month that flying  
saucers are likely to be all the  
rage in the coming weeks.

But, says Dr Bok, the uniden-  
tified flying objects won’t be  
saucers — they will be Venus  
Dr Bok said last month that the  
planet would appear like a  
bright lamp until October.

Because it will be at a point

Because it will be at a point furthest from the sun at that time there would be light refraction causing color changes.

The color changes would make Venus appear to move and that would cause reports of flying saucers to be made.
