■ Many of the Unidentified Flying Object sightings we hear about would never have been reported if the person concerned had given a bit of thought to what could be causing the "object" he was seeing. The reason for my writing about this is the fact that I saw a strange object in the sky just outside my home the other night. At first I thought it could be a UFO, but laughed when I realised what it was. It was the top section of an electric-light pole — the part where a mass of wires meet. The light from across the street was causing a peculiar glare on the wires, while the post could not be seen because of the dark night.
