

Oh, sister! 2 men on the moon

Two nursing sisters have reported seeing an unidentified flying object over Lae.

Sister Knowles Daniels and Sister Goretti Silvan of Angau Memorial Hospital said they were going home from work when they saw a lighted object about half the size of the moon in the sky about 12 miles out of Lae on Sunday night.

Sister Daniels said two black figures like men were on each side of the

object.

She said the figures were smaller than the object, which glowed bright red like the setting sun.

Sister Daniels said the object changed shape from a circle to a banana shape and then to a canoe shape as it moved towards the east.

The two sisters saw the object about 11.12pm as they were returning home from nightshift at the hospital.

She said they watched the object for about eight minutes before it disappeared over the horizon.
