UFO — First Film

SYDNEY: An American government organisation which studies reported sightings of Unidentified Flying Objects says an Australian television channel has the first verifiable film of a UFO. The National Investigatory Committee on Aerial Phenomena said it was able to confirm this after a 10-week study of the film, which included close examination of individual frames by computer. It said after 27,000 reported sightings it believed this was the first film of a UFO. The group of researchers invited the Melbourne television channel, ATV-0 to submit the film which was shot over New Zealand by a current affairs news team late last year.

ATV-0 sighting over New Zealand
