

Vortex - High tech in action

Looking more like the subject of a UFO sighting than a car, Subaru's Vortex 4WD Turbo represents an advanced combination of technological achievements and practicality.

The coupe body styling is among the most aerodynamic in the world. Every panel merges smoothly with the next, all glass is flush with its surroundings and even the door handles don't interrupt the airflow.

Powering the Vortex is Subaru's legendary 1.8 litre, overhead camshaft engine with fuel injection and a turbocharger boosting output to 88kW at 4800 rpm. With minimal modifications, this is the same engine which brought Subaru consecutive Australian Rally Championship titles.

Top speed of Subaru's revolutionary coupe is more than 200 km/h, while 0-100 km/h comes up in just on ten seconds.

But all of this power is worthless if it cannot be effectively put to work. Therefore the Vortex 4WD Turbo offers the choice of manual or automatic transmissions, each providing constant four wheel drive.

The Vortex range starts at \$26,995 in fuel injected from \$29,995 for the turbo charged model and \$34,775 for the state-of-the-art constant 4WD turbo, like all Subarus the Vortex range comes complete with a 2 years/50,000 warranty.
