

UFO or IFO?

Received February 22

I DON'T know what kind of camera or video equipment the Ivansevics used on the photo of the so-called UFO sighting but I can reproduce the same image at any time when observing heavenly objects. The reflective mirror on my refraction telescope is slightly out of adjustment, and will produce an image exactly like the televised pictures. I believe in UFOs if taken literally — that is, they are unidentified — but from outer space, no!

I've been 24 years in the space-tracking industry.
