EDUCATION!

COVER STORY

KENSINGTON, Australia – UNSW has always been proclaimed as one of the best universities in the world. Now, it seems that the reputation has reached the outer fringes of the galaxy. Reports of UFO sightings now number five. “There have been five reported sightings” said a security guard.

Apparently, although the cost of education is getting higher and higher at UNSW, the university does have a good name around the galaxy as providing a good level of education, as well as selling the cheapest Mexican pota-

ing the cheapest Mexican pota-

toes this side of the planet Zonk, where potatoes grow to 4 ft in diameter.

"I saw a UFO" said a student who saw a UFO. "It looked pretty big" according to another student who saw a UFO and thought it looked pretty big.

Along with random UFO sightings, it has been rumoured that one alien has made contact. The alien, who apparently goes by the name of Ninky, has been seen hanging around several important figures within the university.

One lecturer denied ever making contact with the alien and instead claimed that it must have been her bald husband. The president of the UNSW Student Guild, Sen Tan, (see Student Guild section

Ian, (see Student Guild section for complete story) also denied ever meeting Ninky, though she followed that comment by saying that she hears these aliens give good massages.

It is not known just how much UNSW administration is charging Ninky and his/ her (?) alien friends for their education here nor is it known as to what degrees they have been enrolled into.

However, apparently the aliens can disguise themselves as humans to avoid unnecessary attention which may rupture their studies. So Ninky could be anyone. Even that cute new girl in your biology class. But if someone suspicious seems to always be out of money, perhaps it is because they have to pay those enormous fees as interplanetary students. Rumours of the fee being 5,000,000 Buckazoids a session have not been confirmed.

Most sources say the figure is closer to 45,000 Buckazoids
