● N.T. LIGHTS

Worldwide invasion?

Northern Territory UFO experts believe an alien attack may be looming following increased unusual astronomical activity in the Top End.

UFO-ologist Alan Ferguson told The Northern Territory News in May 2010 that flares seen across the coastline sky may be aliens on a reconnaissance mission interested in our military activity.

Although astronomers believe the lights were caused by a meteor shower, Ferguson suggests the movement of light is not in keeping with other meteor showers and is more akin to previously reported UFO activity.
