**'Flying saucer' was
3404
probably a meteor**

New York, Tuesday. — A flaming object seen racing through the night sky between Washington and Boston last night caused thousands of people to telephone police, fire brigades and newspapers. Many reported it as a plane on fire or a flying saucer.

A spokesman for the Smithsonian Astrophysical Observatory at Cambridge, Massachusetts, said the object, most probably a meteor, was traveling from south to north at about the speed of sound.—
