

example, oxygen
thane don't normally
easily. But on Earth
lay, they do...

...because
of biology!

Photosynthesis
makes the oxygen,
and it also makes cool
colors that can be seen
from space!

10/9/92

1
00:00:07,900 --> 00:00:10,240
I've been drawing pretty much all my life.

2
00:00:10,240 --> 00:00:13,340
Comic books were definitely kind of
one of my dreams growing up.

3
00:00:14,980 --> 00:00:16,960
I was kind of just self-taught.

4
00:00:17,140 --> 00:00:18,900
I kind of joke that I finished

5
00:00:19,460 --> 00:00:21,740
my PhD in Geomicrobiology and then went back to

6
00:00:21,750 --> 00:00:24,380
being a 14-year old in my pajamas
drawing

7
00:00:24,380 --> 00:00:26,400
[Laughs] comics in my bedroom.

8
00:00:28,460 --> 00:00:32,040
Just drawing and drawing and drawing
until my hands are shaking and sore.

9
00:00:33,140 --> 00:00:37,540
Like, it takes months, sometimes longer for me to kind
of look back see it with fresh eyes

10
00:00:37,560 --> 00:00:42,860
and be like "Oh... it actually worked." [Laughs]
