

ASTROBIOLOGY at NASA
LIFE IN THE UNIVERSE

DR. SANJOY SOM
Research Scientist
BMSIS

is that the beauty in
humanity lies
in its diversity.

1
00:00:05,570 --> 00:00:02,350
coming back to this idea of the one flag

2
00:00:07,849 --> 00:00:05,580
emblem in space you've written two

3
00:00:10,250 --> 00:00:07,859
papers over the years kind of building

4
00:00:12,230 --> 00:00:10,260
this idea of avara identity together in

5
00:00:14,509 --> 00:00:12,240
space I wonder if you can speak kind of

6
00:00:16,910 --> 00:00:14,519
to your vision of finding that common

7
00:00:19,609 --> 00:00:16,920
identity together it's hard to do it in

8
00:00:22,550 --> 00:00:19,619
in short time but one thing I can say is

9
00:00:25,009 --> 00:00:22,560
that the beauty in humanity lies in its

10
00:00:27,290 --> 00:00:25,019
diversity we learn so much more about

11
00:00:28,910 --> 00:00:27,300
ourselves about The Way We Believe by

12
00:00:30,650 --> 00:00:28,920
taking the time to engage with people

13
00:00:32,749 --> 00:00:30,660

who don't think like us believe like us

14

00:00:34,670 --> 00:00:32,759

or look like us and thinking as

15

00:00:36,470 --> 00:00:34,680

ourselves as humans first and foremost

16

00:00:38,990 --> 00:00:36,480

provides the opportunity to start that

17

00:00:40,670 --> 00:00:39,000

conversation I mean as I learned to

18

00:00:43,670 --> 00:00:40,680

engage with people that are not like me

19

00:00:45,470 --> 00:00:43,680

I get new ideas on how we can come

20

00:00:47,569 --> 00:00:45,480

together as a society which is really

21

00:00:50,630 --> 00:00:47,579

really important because of all the
