

Global Surface Temperature Projections

2020 - 2029

IPCC

1
00:00:13,990 --> 00:00:11,990
you may think of the planet earth as

2
00:00:15,350 --> 00:00:14,000
your own body

3
00:00:17,430 --> 00:00:15,360
visualize

4
00:00:18,710 --> 00:00:17,440
with a one degree temperature rise in

5
00:00:20,870 --> 00:00:18,720
your body

6
00:00:21,990 --> 00:00:20,880
you'll already have the beginnings of

7
00:00:24,230 --> 00:00:22,000
the flu

8
00:00:25,750 --> 00:00:24,240
if it goes up by four or five degrees

9
00:00:27,509 --> 00:00:25,760
you probably have a serious case of

10
00:00:29,349 --> 00:00:27,519
pneumonia or some other

11
00:00:31,109 --> 00:00:29,359
rather major ailment

12
00:00:32,709 --> 00:00:31,119
a few more degrees and your brain will

13
00:00:34,709 --> 00:00:32,719

stop functioning

14

00:00:36,549 --> 00:00:34,719

towards the end of the century you can

15

00:00:38,150 --> 00:00:36,559

see that there's a very very serious

16

00:00:40,310 --> 00:00:38,160

case of temperature

17

00:00:42,069 --> 00:00:40,320

warming and that is equivalent to

18

00:00:45,510 --> 00:00:42,079

pneumonia in your body

19

00:00:47,350 --> 00:00:45,520

one would see a spread of disease

20

00:00:48,790 --> 00:00:47,360

vectors in areas where they have never

21

00:00:50,229 --> 00:00:48,800

been before

22

00:00:52,630 --> 00:00:50,239

and that has a direct

23

00:00:55,670 --> 00:00:52,640

impact on human health

24

00:00:59,110 --> 00:00:55,680

there's also your food temperature

25

00:01:01,430 --> 00:00:59,120

water will impact the food supply system

26

00:01:03,910 --> 00:01:01,440

so there's an expectation that a lot of
