

April 1, 1960  
TIROS-I  
First television  
picture from  
space

1  
00:01:33,840 --> 00:00:07,700

[ music ]

2  
00:01:33,860 --> 00:01:38,430

It contains the most complete collection of instruments ever assembled to study the use

3  
00:01:38,450 --> 00:01:42,610

of space vehicles for comprehensive weather observation.

4  
00:01:42,630 --> 00:01:46,790

The most important of these being two vidicon cameras, one armed with a wide angle

5  
00:01:46,810 --> 00:01:50,970

lens of vast scope, the other with a standard narrow range lens.

6  
00:01:50,990 --> 00:01:55,160

Both record on this magnetic tape machine,

7  
00:01:55,180 --> 00:01:59,310

and on command send their scannings back to earth.

8  
00:03:22,870 --> 00:02:03,480

[ music ]

9  
00:03:22,890 --> 00:03:27,040

Freeze warning out for south tip of Florida

10  
00:03:27,060 --> 00:03:31,220

because of the pattern that we have in the atmosphere, there's that jet, that will

11  
00:03:31,240 --> 00:03:35,380

be relaxing and beginning to move off, but that cold has now pushed all

12  
00:03:35,400 --> 00:03:39,510

the way into the south. Daytona Beach right now, 38 degrees.

13  
00:03:39,530 --> 00:03:43,690

Here's where they need a change in the pattern, along the coast of California,

14

00:03:43,710 --> 00:03:47,860

finally there is some moisture coming in, and because as cold as we have been, they'd been rather warm
