

**JOSH
WILLIS**

1
00:00:02,010 --> 00:00:10,110

[music]

2
00:00:12,200 --> 00:00:16,230

Does the scientific community feel that global warming is decreasing or increasing?

3
00:00:16,250 --> 00:00:20,270

You know, a lot of people ask me, has there been a pause in global warming,

4
00:00:20,290 --> 00:00:24,320

because temperatures aren't increasing as fast as they were a decade ago.

5
00:00:24,340 --> 00:00:28,350

And I always say, paws are for kittens and puppies,

6
00:00:28,370 --> 00:00:32,370

because global warming is definitely still increasing. We're still getting more heat trapped into the oceans,

7
00:00:32,390 --> 00:00:36,400

the oceans are sucking it up, and sea levels are still rising.

8
00:00:36,420 --> 00:00:40,470

Look at the sea level record for the last decade. It's going up like gangbusters,

9
00:00:40,490 --> 00:00:44,550

hasn't slowed down. So, is there a pause in global warming?

10
00:00:44,570 --> 00:00:48,610

No, there's not really a pause in global warming. Sometimes there's natural fluctuations and

11
00:00:48,630 --> 00:00:52,680

we warm up a little faster in one decade and a little slower in another decade,

12
00:00:52,700 --> 00:00:56,740

but global warming, human-caused climate change?

13
00:00:56,760 --> 00:01:00,780

That's definitely going right on up in there. We haven't slowed down at all.
