

1
00:00:00,000 --> 00:00:04,000

A team lead by a NASA scientist has discovered a second possible impact crater

2
00:00:04,000 --> 00:00:08,000

buried beneath the ice in Northwest Greenland.

3
00:00:08,000 --> 00:00:12,000

This follows the discovery of the first ever crater found under an ice sheet,

4
00:00:12,000 --> 00:00:16,000

the 18-mile wide Hiawatha impact crater, located just 114 miles away.

5
00:00:16,000 --> 00:00:20,000

The crater was discovered using NASA satellite images of the ice sheet surface, and radar data from airborne

6
00:00:20,000 --> 00:00:24,000

The new 22-mile wide structure, if confirmed, would be the 22nd largest crater on Earth.
