

**How big is the
Hubble Space Telescope?**

1
00:00:15,110 --> 00:00:13,110
the telescope is rather large it's about

2
00:00:17,189 --> 00:00:15,120
the size of a school bus sitting up

3
00:00:18,710 --> 00:00:17,199
there and it weighs about 27 000 pounds

4
00:00:20,390 --> 00:00:18,720
on the earth if you put it here that's

5
00:00:23,670 --> 00:00:20,400
like the size of two large african

6
00:00:27,349 --> 00:00:25,429
luckily at the end of the last servicing

7
00:00:29,589 --> 00:00:27,359
mission we were actually left with a

8
00:00:31,910 --> 00:00:29,599
telescope in great condition with a new

9
00:00:33,990 --> 00:00:31,920
suite of instruments

10
00:00:35,510 --> 00:00:34,000
hubble is still going very very strong

11
00:00:37,830 --> 00:00:35,520
it's still producing science that people

12
00:00:39,400 --> 00:00:37,840
are going wow we didn't know that it's

13
00:00:47,240 --> 00:00:39,410

just amazing
