

How many times does Hubble orbit Earth in one day?

1
00:00:00,860 --> 00:00:09,669

[Music]

2
00:00:20,310 --> 00:00:12,390

it makes one orbit in about 95 minutes

3
00:00:25,509 --> 00:00:23,429

it's about 340 miles up in space so

4
00:00:27,910 --> 00:00:25,519

hubble is moving quite quickly it's

5
00:00:32,950 --> 00:00:27,920

going about 17 000 miles an hour which

6
00:00:38,130 --> 00:00:35,990

so we have a 95 minute orbit it'll vary
