

**How much data can Hubble
store on board?**

1
00:00:09,690 --> 00:00:08,230
[Music]

2
00:00:12,870 --> 00:00:09,700
not very much at all

3
00:00:17,029 --> 00:00:15,589
hubble space telescope has 24 gigabits

4
00:00:19,109 --> 00:00:17,039
of data storage

5
00:00:21,189 --> 00:00:19,119
any of your thumb drives are massively

6
00:00:24,310 --> 00:00:21,199
massively much more updated to that it's

7
00:00:26,550 --> 00:00:24,320
enough that we can manage it

8
00:00:29,750 --> 00:00:26,560
trying to manage all the data we have to

9
00:00:31,509 --> 00:00:29,760
make it as efficient as possible

10
00:00:33,750 --> 00:00:31,519
our schedulers are very very good about

11
00:00:35,590 --> 00:00:33,760
packing the data get the data down and

12
00:00:37,270 --> 00:00:35,600
get the new stuff up

13
00:00:42,070 --> 00:00:37,280

it's a constant data coming down and
